

Position: 2-3 years post-doctoral position
Field: Immunology
Place: Lyon, France

- The laboratory of Dr Julien C. Marie is seeking **an experienced post-doctoral fellow to study the surface barrier immunity**. Candidate will get access to up-to-date technologies including spectral flow cytometry, single cell mRNA and spatial transcriptomic as well as microbiota metagenomic analysis. The candidate will be part of a highly dynamic lab, which will support the project. The Marie lab is based at the CRCL, hosting 650 scientists, and endowed with the highest standards of facilities. More information about the Marie lab (including publications) and the CRCL are available at:

<https://www.crcl.fr/en/tumor-escape-resistance-immunity-department/tgf-beta-and-immune-response/>

- Candidate must have **solid expertise in immunology**. A PhD in the immunology field is mandatory. Candidate should be used to practicing *in vivo* experiments and flow cytometry. An experience in gut and/or skin immunology as well as microbiota will be an asset, but not mandatory
- Salary will be covered by the lab and will depend on the expertise of the candidate.
- Both English and French are the languages of the Marie Lab.

Candidate should provide **a *curriculum vitae*, a letter of motivation with a description of their research interests** to julien.marie@inserm.fr (email subject: post-doctoral position). Selected candidates will be contacted for interview and **position can start rapidly**.

Applications should be sent by April 15th 2024
